## Keys

### Types

key

- SettingKey[T] key value
- TaskKey[T] key *task* value
- InputKey[T] key task Input Tasks

### Keys

```

keys      Keys    build.sbt      import sbt.Keys._    name
sbt.Keys.name

```

### Keys

```

    settingKey taskKey inputKey    keys    key value    key
val      task hello    key

lazy val hello = taskKey[Unit](" task ")

.sbt      settings    vals defs      settings      vals
defs      settings

    lazy val    val

```

## Task vs Setting keys

```
TaskKey[T]    task  Tasks    compile  package    Unit Unit  Scala
void         task      package TaskKey[File] task      jar
            task  sbt    compile sbt      task
sbt  map  setting      name    task    compile -
    key   task    setting  "taskiness" (    key   property    value
```

### tasks settings

```
:=    setting    task    setting  value    task    task

    hello task
lazy val hello = taskKey[Unit]("An example task")

lazy val root = (project in file("."))
  .settings(
    hello := { println("Hello!") }
  )

    settings
lazy val root = (project in file("."))
  .settings(
    name := "hello"
  )
```

### Tasks Settings

```
task key    Setting    setting key    Setting    taskKey := 42
Setting[Task[T]]  settingKey := 42  Setting[T]    task key
T    value

T    Task[T]    setting    task    setting
```

### sbt Keys

```
sbt    task  name    task    compile    compile task compile
task  key

    setting key  name    task key  name setting key  value    task
key  name  task    value  show <task name>    <task name>
task    key name    camelCase    name  Scala
```

```

key      sbt      inspect <keyname>  inspect      setting
value    setting

```

### Per-configuration dependencies

```

          src/test/scala    Test configuration
          Test configuration classpath    Compile configuration    % "test"
libraryDependencies += "org.apache.derby" % "derby" % "10.4.1.3" % "test"
          Test configuration
libraryDependencies += "org.apache.derby" % "derby" % "10.4.1.3" % Test
          sbt          show compile:dependencyClasspath    derby jar          show
test:dependencyClasspath          derby jar
          ScalaCheck Specs2 ScalaTest          % "test"

```

```

.sbt

```

```

          jar
          Project lazy val
lazy val util = project
lazy val core = project
val      ID      ID          in
lazy val util = project.in(file("util"))
lazy val core = project in file("core")

```

To factor out common settings across multiple projects, create a sequence named `commonSettings` and call `settings` method on each project.

```

        commonSettings      settings

lazy val commonSettings = Seq(
  organization := "com.example",
  version      := "0.1.0",
  scalaVersion := "2.12.1"
)

lazy val core = (project in file("core"))
  .settings(
    commonSettings,
    // other settings
  )

lazy val util = (project in file("util"))
  .settings(
    commonSettings,
    // other settings
  )

    version

```

aggregate classpath

## Aggregation

Aggregation    aggregate    task    aggregated

```

lazy val root = (project in file(".")).aggregate(util, core)

lazy val util = project

lazy val core = project
