## Keys

### Types

key

- SettingKey[T] key value
- TaskKey[T] key task value
- InputKey[T] key task Input Tasks

### Keys

```

keys Keys build.sbt import sbt.Keys._ name
sbt.Keys.name

```

### Keys

```

settingKey taskKey inputKey keys key value key
val task hello key
lazy val hello = taskKey[Unit](" task ")
.sbt settings vals defs settings vals
defs settings
lazy val val

```

## Task vs Setting keys

```
TaskKey[T]    task Tasks compile package Unit Unit Scala
void         task package TaskKey[File] task jar
            task sbt compile sbt task
sbt map setting name task compile -
    key task setting "taskiness" ( key property value
```

### tasks settings

```
:= setting task setting value task task
```

```
hello task
```

```
lazy val hello = taskKey[Unit]("An example task")
```

```
lazy val root = (project in file("."))
  .settings(
    hello := { println("Hello!") }
  )
```

```
settings
```

```
lazy val root = (project in file("."))
  .settings(
    name := "hello"
  )
```

## Tasks Settings

```
task key Setting setting key Setting taskKey := 42
Setting[Task[T]] settingKey := 42 Setting[T] task key
T value
T Task[T] setting task setting
```

### sbt Keys

```
sbt task name task compile compile task compile
task key
    setting key name task key name setting key value task
key name task value show <task name> <task name>
task key name camelCase name Scala
    key sbt inspect <keyname> inspect setting
value setting
```

## Per-configuration dependencies

```
src/test/scala  Test configuration
```

```
Test configuration classpath  Compile configuration  % "test"
```

```
libraryDependencies += "org.apache.derby" % "derby" % "10.4.1.3" % "test"
```

```
Test configuration
```

```
libraryDependencies += "org.apache.derby" % "derby" % "10.4.1.3" % Test
```

```

sbt          show compile:dependencyClasspath  derby jar      show
test:dependencyClasspath      derby jar
      ScalaCheck Specs2  ScalaTest      % "test"

```

```

.sbt

```

```

      jar
Project lazy val
lazy val util = project

lazy val core = project
val      ID      ID      in
lazy val util = project.in(file("util"))

lazy val core = project in file("core")

```

To factor out common settings across multiple projects, create a sequence named `commonSettings` and call `settings` method on each project.

```

      commonSettings      settings

lazy val commonSettings = Seq(
  organization := "com.example",
  version := "0.1.0",
  scalaVersion := "2.12.1"
)

lazy val core = (project in file("core"))
  .settings(
    commonSettings,
    // other settings
  )

lazy val util = (project in file("util"))

```

```

.settings(
  commonSettings,
  // other settings
)

version

```

aggregate classpath

### Aggregation

Aggregation    aggregate    task    aggregated

```

lazy val root = (project in file(".")).aggregate(util, core)

```

```

lazy val util = project

```

```

lazy val core = project

```

```
